

Not Scaling – Part 2: Starting Small to Build Big

The big news to share this week on bounceit!™ is that the app went live in the app store, after a long period of creation, and we are starting the process of scaling by not scaling, as was discussed in [last week's blog](#). This week will be focused on getting a small group to use and try it out on all devices to make sure everything is flowing

well. Then, we will move to our local and social media friends to give it a try and to share with others, if they like it. And finally, on to the rest of the world.

Partnering for Growth

A few weeks back, I shared what we are doing to move forward on the path of concentration around a certain focus with mobile. We have built a mobile app platform that is customizable and appropriate for our focus of working with marketing companies. This has been an evolution for us, and one that recently has had a lot of the details come together.

As I shared before, mobile is growing and the smart phone is being adopted with exponential growth. It has provided opportunity for businesses to connect with their customers that has not been possible before.

The Goal Is Antifragile

Some of you may remember the book, “The Black Swan,” that I have written quite a few blogs on in the past. The reason I have shared from Nassim Taleb often is his philosophical thinking about the world and investing is so insightful and unique that it makes for serious contemplation about the world in which we live.

Compensating with Scalability

A few weeks back, I wrote about [my mistakes](#) in not having a focus on a specific niche or vertical and mentioned a bit about what we are doing to push forward with a vertical in the health care space, focusing on mobile apps. We have made some changes and are pushing forward to create a market in the app world that is more scalable than what we were doing before.

Can a Meeting be a Game Changer?

Meetings Suck!

Why is it that so many of us don't like meetings? I personally like the feeling of getting a bunch of innovative people together generating better and smarter ideas than any one of us could come up with on our own. Most people have a hard time seeing a meeting as a game changer. Would you think a meeting could speed up change or push you ahead of the competition

to become the global leader in the industry?

Keeping It Simple Is An Understatement

When we are looking at our business, it seems completely obvious we should just keep it simple. While this may seem obvious, it is much more difficult to accomplish in a complex world filled with complex processes, complex rules, complex people, and complex competitive forces. If we could be more disciplined and keep it simple in our businesses, would we have more success? Well, that is what [Ken Segall](#) says in his new book that explains how [Apple](#)'s success was based on not just simplicity, but the Insanely Simple.

My Mistakes

Do you ever think about the mistakes you've made in running a business or in life? I would hate to think about the mistakes I have made with the various businesses that I have overseen. If you listed them on a hard drive, you would probably need a gigabit of space. These mistakes include timing, strategy, approach, negotiation, what to focus on, what not to focus on, not keeping it simple, too much process, not enough process, people, and on and on.

Offering Less to Be More

In business, we often strive to make all of our customers happy by being good at every feature or service we offer them. The problem is that being good at a lot of things makes it difficult to be great at any one thing. Why do we do this? We think we can excel in any one area when the reality is we are just good or average in all areas. Have you ever thought about trying to be bad at something you do so that you can grow your business and increase your market share?

Unearthing the Latent Demand to Grow

Over the past few weeks, we have been discussing the change in the marketplace oversupply. If we are going to grow our companies, we need to figure out how to zero in on the right demand sectors. To do this, you first must figure out your demand profit pools. So, what are those? Demand profit pools are the areas of untapped demand that we as business owners may not be aware of because we haven't dug deep enough.

In "How Companies Win," Kash and Calhoun discuss this and cite an example of the dog food industry. This industry provided bags of food under standard segments based on large, medium, and small dogs.

Does Your Business have a Demand Problem?

Looking at what has been happening in the world with the slow economy, you would think it all has to do with a bad recession or political activity that is less than favorable to the business world. Look a little deeper, and you will see things are changing. We should be aware of all that is going on for the sake of positioning our businesses for the most potential possible.

I believe, as a leader of a company and the one responsible for putting us in the path of future waves of opportunity, my purpose is to read and learn as much as possible. To achieve this, I participate in the [E0 University Conferences](#), attend

the [Verne Harnish Fortune Conference](#), and read a large number of books every year.
