

Is Geo-Fencing on Your Map?

As we continue to build mobile apps for clients, the advantages resulting from these apps are appearing limitless. I have been in Charlotte this week for the E0 Nerve Conference. When I called for a taxi, they said that I can download an app that will send a taxi to me. Not only that, but I can follow the taxi's location as it comes to pick me up.

Follow the Big Trends or the Small Ones?

I have talked to a lot of people about the big trend of mobile, the growth in this area, how it is changing the way we do business, and how if we don't want to be left behind, we need to adapt. Some of this has a longer time horizon and some of it needs to be thought about in the short-term.

Adding Context to Your Decisions

When we look at the world, a lot of times we miss the aspect of context on how we look at things. This has importance in making business decisions of all sizes and shapes. This can show up a lot with people's decisions and with how they look at their competitors and strategies.

Partnering for Growth

A few weeks back, I shared what we are doing to move forward on the path of concentration around a certain focus with mobile. We have built a mobile app platform that is customizable and appropriate for our focus of working with marketing companies. This has been an evolution for us, and one that recently has had a lot of the details come together.

As I shared before, mobile is growing and the smart phone is being adopted with exponential growth. It has provided opportunity for businesses to connect with their customers that has not been possible before.

The Goal Is Antifragile

Some of you may remember the book, "The Black Swan," that I have written quite a few blogs on in the past. The reason I

have shared from Nassim Taleb often is his philosophical thinking about the world and investing is so insightful and unique that it makes for serious contemplation about the world in which we live.

Compensating with Scalability

A few weeks back, I wrote about [my mistakes](#) in not having a focus on a specific niche or vertical and mentioned a bit about what we are doing to push forward with a vertical in the health care space, focusing on mobile apps. We have made some changes and are pushing forward to create a market in the app world that is more scalable than what we were doing before.

Can a Meeting be a Game Changer?

Meetings Suck!

Why is it that so many of us don't like meetings? I personally like the feeling of getting a bunch of innovative people together generating better and smarter ideas than any one of us could come up with on our own. Most people have a hard time seeing a meeting as a game changer. Would you think a meeting could speed up change or push you ahead of the competition

to become the global leader in the industry?

Kick Start The New Year

As we start the New Year, so many of us reflect upon what it would be like to make this year a better one. Instead, what if we think about how we can make it happen? How does the reality that we want to see actually manifest? It happens by first figuring out where you want to go and removing the obstacles that are stopping you from getting there.

Where Is The Internet Going?

An analyst I used to follow in my investment days, [Henry Blodget](#), is now an editor for [Business Insider](#), and his own company has been on top of the internet space since the beginning. I like hearing what he has to say because he has had so many years watching the ups and downs of the firms in this space, and he offers good insight into where these companies are going.

Business Insider recently held its annual IGNITION conference with great speakers from [LinkedIn](#), [Google](#), [Groupon](#), and [Time Warner](#).

Communication Revolution

Back in 1995, when [Robert Loest](#) and I were telling the world about our new [mutual fund IPS Millennium](#), we told a story explaining that, historically, change within a civilization first occurs at an inflection point and is followed by big change and then a long plateau period.

We shared how civilization started with hunter-gathers, and people maintained that lifestyle for over 100,000 years. Then, we had an inflection point, learning to plant seeds and grow food. This was the [Agricultural Revolution of the Neolithic Era](#), and it went on for a few thousand years.
